

# Why Argentyn 23<sup>®</sup>?

**No claims, just facts.**

## Particle Size

Average 0.0008 microns / 0.8 nanometers. This is the smallest ever seen. This allows for greater surface area, absorption and excretion.

## Safety

A picoscalar 23 ppm formulation can be safely consumed 3 times a day for 70 years. Quantity can never replace quality.

## Particle Energy

At 96%, Argentyn 23<sup>®</sup> has more active silver than any professional brand.

This means the particles have the energy needed to actually seek out their target.

## Purity

A silver product should be clear because it should only consist of pure silver in pharmaceutical-grade water. A glass container prevents leaching that occurs with plastic.
