# MANNANALOE™

**MANNANALOE™** is Beta-1,4-Acetylated Glycomannan (AG) which is derived from the gel of the leaf of the Aloe Barbadensis Miller Plant. The polysaccharide of this Aloe is a small, short chain sugar molecule that is comprised of glucose and mannose sugar molecules connected together. There is a large range in sizes of polysaccharide molecules. The size and makeup of the molecule determines it's effectiveness for various applications. **MANNANALOE™ is composed predominantly of small polysaccharide short chain sugar molecules which measure in size from 12,500 - 500,000 Daltons. Molecules in this size range have proven to have a powerful healing effect on inflammatory conditions,** and have also been found to be effective in human studies in patients with Insulin Resistance.

Many scientific and clinical communities are aware of Beta-1,4-acetylated glycomannan's efficaciousness. **It has been noted in various scientific studies which have yielded evidence that:**

- ◆ Glycemic levels and triglyceride levels are normalized in patients with Insulin Resistance
- ◆ These molecules are potent anti-inflammatory agents that serve as anti-histamines, anti-bradykinins, and other enzymes that are related to chronic inflammation such as arthritis
- ◆ Effective with inflammation of the GI Tract

## WHO MAY BENEFIT FROM USING MANNANALOE™?

- ◆ Individuals with Insulin Resistance
- ◆ Those who have allergic type responses
- ◆ Those with chronic inflammatory conditions
- ◆ Individuals with chronic bowel inflammatory conditions
- ◆ Those that may have hyperpermeability syndrome (Leaky Gut)
- ◆ Individuals who have arthritic type and related conditions

## Supplement Facts

Serving Size: One Capsule

One Capsule Contains:

Beta-1,4-acetylated glycomannan.....500mg.\*

\* Daily Value not established

Other ingredients: Gelatin.
