Thyroid Response® Complete Care
Supports healthy thyroid function

- FoodState® iodine and selenium
- Nourishing ingredients including L-tyrosine, coleus forskohlii and kelp
- Adaptogenic support including Sensoril® Ashwagandha and holy basil

40107 - 90 tablets

Endocrine Support
A healthy metabolism is essential to maintaining optimal energy levels, body composition and a response to daily stressors. Thyroid Response Complete Care provides unparalleled nutritional support that targets the thyroid gland specifically and has the capacity to support a healthy and efficient metabolism.

Thyroid Response Complete Care is a synergistic combination of nutrients, herbs and trace mineral-rich foods that support thyroid health and function. It includes thyroid-supportive minerals such as selenium, iodine and zinc. Selenium has an essential role as a component in the conversion of T4 to T3; iodine and zinc are required in the production of thyroid hormones.

The amino acid L-tyrosine is a crucial building block in the production of the thyroid hormones T4 (thyroxine) and T3 (triiodothyronine). Without adequate levels of this amino acid, the body may not produce enough thyroid hormone to maintain a healthy metabolic balance.

The herbal blend in Thyroid Response Complete Care includes Sensoril® ashwagandha to support thyroid function. Sensoril is standardized to 8% withanolides, which provides vital support to metabolic processes, healthy stress response, as well as optimal energy levels. This botanical also helps promote a healthy level of cortisol in the blood, which is necessary for optimal conversion of T4 to T3.

Additional whole herbs include coleus forskohlii root, which contains forskolin, an activator of cAMP (cyclic adenosine monophosphate) to nourish the thyroid.

Other key inclusions are (holy) basil to support optimal metabolic function and kelp, an iodine-rich food source.

A Look At Key Ingredients:

**Zinc:** There is a close relationship between zinc levels and thyroid-hormone levels. In individuals with healthy thyroid, there is a significant positive connection between serum zinc and free T3 levels.†

**Selenium:** Selenium has emerged in recent years as a key component in maintaining a properly functioning thyroid gland.† Selenium has a significant impact on inflammatory activity. Studies suggest selenium has the potential for thyroid-protective properties.‡

**Kelp:** A small-scale study in Japan demonstrated the ability of iodine rich kelp powder to promote a healthy functioning thyroid gland and maintain TSH levels within normal limits.‡
